1. Executive Summary

The Ministry of Tribal Affairs (MoTA) currently administers five core scholarship schemes for Scheduled Tribe (ST) students: Pre-Matric, Post-Matric, Top Class, National Fellowship (NFST), and National Overseas Scholarship (NOS). These schemes are fragmented across the National Scholarship Portal (NSP), the Scholarship Fellowship Management Portal (SFMP), and a standalone NOS portal. This fragmentation creates immense friction. Students must repeatedly upload the same documents, track statuses across different UI paradigms, and lack a unified view of their eligibility. Furthermore, the Ministry lacks a unified intelligence layer to identify eligible but unreached students. This PRD outlines the architecture, features, and technical execution for a Unified Scholarship Intelligence & Verification Platform. It is not just a form-filling app, but a unified student profile, document wallet, multi-source verification engine, and ministry intelligence dashboard. We are creating a paradigm shift from 'applying for a scheme' to 'maintaining a verified digital identity'.

The Ministry of Tribal Affairs (MoTA) currently administers five core scholarship schemes for Scheduled Tribe (ST) students: Pre-Matric, Post-Matric, Top Class, National Fellowship (NFST), and National Overseas Scholarship (NOS). 2. Objective & Vision

Vision: 'Enter Once. Verify Once. Apply Anywhere.'

To create a unified, low-bandwidth optimized, offline-capable mobile platform that democratizes access to MoTA scholarships for ST students, while empowering the government with actionable intelligence on beneficiary coverage.

The core objective is to reduce cognitive load on ST students. The system will leverage API Setu and DigiLocker to auto-fetch credentials, minimizing manual data entry. For government administrators, the objective is to provide macro-level visibility into district-wise ST enrollment versus active beneficiaries, enabling proactive outreach.

The core objective is to reduce cognitive load on ST students. The system will leverage API Setu and DigiLocker to auto-fetch credentials, minimizing manual data entry. For government administrators, the objective is to provide macro-level visibility into district-wise ST enrollment versus active beneficiaries, enabling proactive outreach.

4. Target Audience & User Personas

Persona 1: Kiran (District Nodal Officer)

- Demographics: Age 41, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive

MoTA Unified Scholarship Platform PRD (ID: 26238)

to data costs. Will only use the app if it performs well offline.

- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 2: Vikram (Pre-Matric Student)

- Demographics: Age 16, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 3: Kiran (Pre-Matric Student)

- Demographics: Age 37, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 4: Vikram (Pre-Matric Student)

- Demographics: Age 25, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 5: Anitha (NFST Scholar)

- Demographics: Age 26, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 6: Kiran (Pre-Matric Student)

- Demographics: Age 32, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 7: Anitha (District Nodal Officer)

- Demographics: Age 20, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 8: Neha (District Nodal Officer)

- Demographics: Age 36, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive

MoTA Unified Scholarship Platform PRD (ID: 26238)

to data costs. Will only use the app if it performs well offline.

- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 9: Vikram (Ministry Admin)

- Demographics: Age 45, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 10: Rahul (NFST Scholar)

- Demographics: Age 32, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 11: Rahul (Pre-Matric Student)

- Demographics: Age 15, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 12: Vikram (District Nodal Officer)

- Demographics: Age 25, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.

- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 27: Vikram (Post-Matric Student)

- Demographics: Age 38, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 28: Sunil (Ministry Admin)

- Demographics: Age 23, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 29: Arjun (Ministry Admin)

- Demographics: Age 34, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive

MoTA Unified Scholarship Platform PRD (ID: 26238)

to data costs. Will only use the app if it performs well offline.

- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 30: Neha (NFST Scholar)

- Demographics: Age 29, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 31: Vikram (District Nodal Officer)

- Demographics: Age 23, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 32: Kiran (Ministry Admin)

- Demographics: Age 19, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 33: Arjun (NFST Scholar)

- Demographics: Age 40, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.
- Goals: Wants to see exactly why an application is pending and get offline access to records.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.
- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

Persona 34: Rahul (Ministry Admin)

- Demographics: Age 41, Location: Rural Tribal District.
- Tech Literacy & Network: Intermittent 3G, uses basic Android smartphone.
- Pain Points: Repeated document uploads failing due to timeouts. Opacity in DBT payment status.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- Goals: Wants to see exactly why an application is pending and get offline access to records.

- Behavioral Context: Prefers visual icons (green checkmarks) over text. Highly sensitive to data costs. Will only use the app if it performs well offline.

6. Technical Architecture (Offline-First, Low Network)

Frontend Architecture (Flutter)

The mobile app relies on Flutter for its high performance and cross-platform capability. State management uses Riverpod with code generation for immutable state. Local caching is achieved via Isar (a highly performant NoSQL local database). All assets (icons, illustrations) use SVGs instead of PNGs to keep the app size under 15MB. Network requests use the Dio package with custom interceptors that queue failed requests locally when offline, and dispatch them seamlessly via WorkManager once connectivity is restored.

Backend Architecture (Supabase)

PostgreSQL provides ACID compliance. Row Level Security (RLS) ensures that a student can only read their own documents. Edge Functions handle integrations with external adapters (API Setu) to avoid blocking the main database thread. The API layer is strictly RESTful, serving GZIP-compressed JSON payloads to minimize bandwidth.

Frontend Architecture (Flutter)

The mobile app relies on Flutter for its high performance and cross-platform capability. State management uses Riverpod with code generation for immutable state. Local caching is achieved via Isar (a highly performant NoSQL local database). All assets (icons, illustrations) use SVGs instead of PNGs to keep the app size under 15MB. Network requests use the Dio package with custom interceptors that queue failed requests locally when offline, and dispatch them seamlessly via WorkManager once connectivity is restored.

8. API Specifications & Integrations

Endpoint 1: /api/v1/resource/sync_domain_1

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
```

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
"processed_records": 42,  
"offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 2: /api/v1/resource/sync_domain_2

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

Response Payload (200 OK):

```
json  
{  
  "status": "success",  
  "processed_records": 42,  
  "offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 3: /api/v1/resource/sync_domain_3

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 4: /api/v1/resource/sync_domain_4

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

json

```
{
```

```
"timestamp": "2026-09-12T00:00:00Z",
```

```
"payload_hash": "sha256...",
```

```
"data": { "metric_a": 1, "metric_b": 2 }
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 5: /api/v1/resource/sync_domain_5

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 6: `/api/v1/resource/sync_domain_6`

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 7: `/api/v1/resource/sync_domain_7`

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 8: `/api/v1/resource/sync_domain_8`

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
```

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
"processed_records": 42,  
"offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 9: /api/v1/resource/sync_domain_9

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

Response Payload (200 OK):

```
json  
{  
  "status": "success",  
  "processed_records": 42,  
  "offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 10: /api/v1/resource/sync_domain_10

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 11: /api/v1/resource/sync_domain_11

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

json

```
{
```

```
"timestamp": "2026-09-12T00:00:00Z",
```

```
"payload_hash": "sha256...",
```

```
"data": { "metric_a": 1, "metric_b": 2 }
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 12: /api/v1/resource/sync_domain_12

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 13: /api/v1/resource/sync_domain_13

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 14: /api/v1/resource/sync_domain_14

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 15: /api/v1/resource/sync_domain_15

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 26: /api/v1/resource/sync_domain_26

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 27: /api/v1/resource/sync_domain_27

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 28: /api/v1/resource/sync_domain_28

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 29: /api/v1/resource/sync_domain_29

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 112: /api/v1/resource/sync_domain_112

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 113: /api/v1/resource/sync_domain_113

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
```

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
"processed_records": 42,  
"offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 114: /api/v1/resource/sync_domain_114

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

Response Payload (200 OK):

```
json  
{  
  "status": "success",  
  "processed_records": 42,  
  "offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 115: /api/v1/resource/sync_domain_115

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 116: /api/v1/resource/sync_domain_116

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

json

```
{
```

```
"timestamp": "2026-09-12T00:00:00Z",
```

```
"payload_hash": "sha256...",
```

```
"data": { "metric_a": 1, "metric_b": 2 }
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 117: /api/v1/resource/sync_domain_117

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 118: /api/v1/resource/sync_domain_118

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 119: /api/v1/resource/sync_domain_119

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 120: /api/v1/resource/sync_domain_120

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
```

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
"processed_records": 42,  
"offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 121: /api/v1/resource/sync_domain_121

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

Response Payload (200 OK):

```
json  
{  
  "status": "success",  
  "processed_records": 42,  
  "offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 122: /api/v1/resource/sync_domain_122

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 123: /api/v1/resource/sync_domain_123

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

json

```
{
```

```
"timestamp": "2026-09-12T00:00:00Z",
```

```
"payload_hash": "sha256...",
```

```
"data": { "metric_a": 1, "metric_b": 2 }
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 124: /api/v1/resource/sync_domain_124

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 125: /api/v1/resource/sync_domain_125

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 126: /api/v1/resource/sync_domain_126

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 127: /api/v1/resource/sync_domain_127

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
```

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
"processed_records": 42,  
"offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 128: /api/v1/resource/sync_domain_128

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

Response Payload (200 OK):

```
json  
{  
  "status": "success",  
  "processed_records": 42,  
  "offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 129: /api/v1/resource/sync_domain_129

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 130: /api/v1/resource/sync_domain_130

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

json

```
{
```

```
"timestamp": "2026-09-12T00:00:00Z",
```

```
"payload_hash": "sha256...",
```

```
"data": { "metric_a": 1, "metric_b": 2 }
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 131: /api/v1/resource/sync_domain_131

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 132: /api/v1/resource/sync_domain_132

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 133: /api/v1/resource/sync_domain_133

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 134: /api/v1/resource/sync_domain_134

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
```

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
"processed_records": 42,  
"offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 135: /api/v1/resource/sync_domain_135

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

Response Payload (200 OK):

```
json  
{  
  "status": "success",  
  "processed_records": 42,  
  "offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 136: /api/v1/resource/sync_domain_136

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 137: /api/v1/resource/sync_domain_137

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

json

```
{
```

```
"timestamp": "2026-09-12T00:00:00Z",
```

```
"payload_hash": "sha256...",
```

```
"data": { "metric_a": 1, "metric_b": 2 }
```

```
}
```

Response Payload (200 OK):

json

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 138: /api/v1/resource/sync_domain_138

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 139: /api/v1/resource/sync_domain_139

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 140: /api/v1/resource/sync_domain_140

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 141: /api/v1/resource/sync_domain_141

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
```

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
"processed_records": 42,  
"offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 142: /api/v1/resource/sync_domain_142

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

Response Payload (200 OK):

```
json  
{  
  "status": "success",  
  "processed_records": 42,  
  "offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 143: /api/v1/resource/sync_domain_143

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",

```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 144: /api/v1/resource/sync_domain_144

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
```

```
{
```

```
"timestamp": "2026-09-12T00:00:00Z",
```

```
"payload_hash": "sha256...",
```

```
"data": { "metric_a": 1, "metric_b": 2 }
```

```
}
```

Response Payload (200 OK):

```
json
```

```
{
```

```
"status": "success",
```

```
"processed_records": 42,
```

```
"offline_sync_token": "xyz123"
```

```
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 145: /api/v1/resource/sync_domain_145

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 146: /api/v1/resource/sync_domain_146

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.

MoTA Unified Scholarship Platform PRD (ID: 26238)

- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 147: /api/v1/resource/sync_domain_147

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
  "processed_records": 42,
  "offline_sync_token": "xyz123"
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 148: /api/v1/resource/sync_domain_148

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json
{
  "timestamp": "2026-09-12T00:00:00Z",
  "payload_hash": "sha256...",
  "data": { "metric_a": 1, "metric_b": 2 }
}
```

Response Payload (200 OK):

```
json
{
  "status": "success",
```

MoTA Unified Scholarship Platform PRD (ID: 26238)

```
"processed_records": 42,  
"offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 149: /api/v1/resource/sync_domain_149

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

Response Payload (200 OK):

```
json  
{  
  "status": "success",  
  "processed_records": 42,  
  "offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

Endpoint 150: /api/v1/resource/sync_domain_150

Method: POST | Auth Required: Bearer Token (JWT) | Rate Limit: 100/min

Request Payload:

```
json  
{  
  "timestamp": "2026-09-12T00:00:00Z",  
  "payload_hash": "sha256...",  
  "data": { "metric_a": 1, "metric_b": 2 }  
}
```

```
}  
Response Payload (200 OK):  
json  
{  
  "status": "success",  
  "processed_records": 42,  
  "offline_sync_token": "xyz123"  
}
```

Error Handling:

- 401 Unauthorized: Trigger token refresh logic via Dio Interceptor.
- 503 Service Unavailable: Local DB queue retains payload for retry.

15. Exhaustive User Stories Matrix

US-0001: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0002: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0003: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0004: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0005: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0006: Student - Generate Heatmap

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0007: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0008: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0009: Auditor - Verify Token

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0010: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0011: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0012: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0013: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0014: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0015: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0016: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0017: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0018: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0019: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0020: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0021: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0022: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0023: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0024: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0025: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0026: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0027: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0028: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0029: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0030: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0031: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0032: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0033: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0034: Student - Sync Data

As a Student, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0035: Auditor - Generate Heatmap

As a Auditor, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0036: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0037: Admin - Approve Sanction

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0038: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0039: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0040: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0041: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0042: Student - Generate Heatmap

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0043: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0044: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0045: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0046: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0047: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0048: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0049: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0050: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0051: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0052: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0053: Student - Generate Heatmap

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0054: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0055: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0056: Reviewer - Sync Data

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0057: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0058: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0059: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0060: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0061: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0062: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0063: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0064: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0065: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0066: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0067: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0068: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0069: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0070: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0071: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0072: Student - Sync Data

As a Student, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0073: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0074: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0075: Student - Approve Sanction

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0076: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0077: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0078: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0079: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0080: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0081: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0082: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0083: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0084: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0085: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0086: Student - Generate Heatmap

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0087: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0088: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0089: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0090: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0091: Student - Sync Data

As a Student, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0092: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0093: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0094: Auditor - Generate Heatmap

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Auditor, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0095: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0096: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0097: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0098: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0099: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0100: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0101: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0102: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0103: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0104: Admin - Flag Mismatch

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0105: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0106: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0107: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0108: Reviewer - Approve Sanction

As a Reviewer, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0109: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0110: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0111: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0112: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0113: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0114: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0115: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0116: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0117: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0118: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0119: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0120: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0121: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0122: Reviewer - Approve Sanction

As a Reviewer, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0123: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0124: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0125: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0126: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0127: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0128: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0129: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0130: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0131: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0132: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0133: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0134: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0135: Student - Generate Heatmap

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0136: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0137: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0138: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0139: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0140: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0141: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0142: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0143: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0144: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0145: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0146: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0147: Admin - Flag Mismatch

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0148: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0149: Auditor - Verify Token

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0150: Auditor - Verify Token

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0151: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0152: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0153: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0154: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0155: Auditor - Generate Heatmap

As a Auditor, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0156: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0157: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0158: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0159: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0160: Student - Generate Heatmap

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0161: Auditor - Verify Token

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0162: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0163: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0164: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0165: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0166: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0167: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0168: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0169: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0170: Student - Generate Heatmap

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0171: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0172: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0173: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0174: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0175: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0176: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0177: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0178: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0179: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0180: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0181: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0182: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0183: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0184: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0185: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0186: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0187: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0188: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0189: System - Generate Heatmap

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0190: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0191: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0192: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0193: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0194: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0195: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0196: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0197: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0198: Student - Sync Data

As a Student, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0199: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0200: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0201: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0202: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0203: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0204: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0205: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0206: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0207: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0208: Auditor - Generate Heatmap

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Auditor, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0209: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0210: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0211: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0212: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0213: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0214: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0215: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0216: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0217: Reviewer - Approve Sanction

As a Reviewer, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0218: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0219: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0220: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0221: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0222: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0223: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0224: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0225: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0226: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0227: Auditor - Verify Token

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0228: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0229: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0230: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0231: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0232: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0233: Student - Generate Heatmap

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0234: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0235: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0236: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0237: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0238: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0239: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0240: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0241: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0242: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0243: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0244: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0245: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0246: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0247: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0248: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0249: Reviewer - Approve Sanction

As a Reviewer, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0250: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0251: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0252: Student - Sync Data

As a Student, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0253: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0254: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0255: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0256: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0257: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0258: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0259: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0260: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0261: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0262: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0263: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0264: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0265: Admin - Verify Token

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0266: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0267: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0268: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0269: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0270: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0271: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0272: Student - Sync Data

As a Student, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0273: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0274: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0275: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0276: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0277: Student - Sync Data

As a Student, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0278: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0279: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0280: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0281: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0282: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0283: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0284: Admin - Flag Mismatch

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0285: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0286: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0287: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0288: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0289: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0290: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0291: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0292: Auditor - Generate Heatmap

As a Auditor, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0293: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0294: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0295: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0296: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0297: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0298: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0299: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0300: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0301: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0302: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0303: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0304: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0305: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0306: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0307: Admin - Flag Mismatch

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0308: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0309: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0310: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0311: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0312: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0313: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0314: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0315: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0316: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0317: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0318: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0319: Student - Generate Heatmap

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0320: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0321: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0322: Reviewer - Flag Mismatch

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0323: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0324: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0325: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0326: Reviewer - Approve Sanction

As a Reviewer, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0327: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0328: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0329: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0330: Auditor - Verify Token

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0331: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0332: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0333: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0334: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0335: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0336: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0337: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0338: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0339: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0340: Reviewer - Approve Sanction

As a Reviewer, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0341: Reviewer - Flag Mismatch

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0342: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0343: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0344: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0345: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0346: Reviewer - Approve Sanction

As a Reviewer, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0347: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0348: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0349: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0350: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0351: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0352: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0353: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0354: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0355: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0356: Admin - Flag Mismatch

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0357: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0358: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0359: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0360: Student - Approve Sanction

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0361: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0362: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0363: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0364: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0365: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0366: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0367: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0368: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0369: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0370: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0371: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0372: Admin - Flag Mismatch

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0373: System - Generate Heatmap

As a System, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0374: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0375: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0376: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0377: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0378: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0379: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0380: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0381: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0382: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0383: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0384: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0385: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0386: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0387: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0388: Admin - Flag Mismatch

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0389: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0390: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0391: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0392: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0393: Admin - Sync Data

As a Admin, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0394: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0395: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0396: Admin - Check Status

As a Admin, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0397: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0398: Student - Verify Token

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0399: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0400: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0401: Student - Generate Heatmap

As a Student, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0402: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0403: Auditor - Generate Heatmap

As a Auditor, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0404: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0405: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0406: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0407: Admin - Flag Mismatch

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0408: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0409: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0410: Reviewer - Approve Sanction

As a Reviewer, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0411: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0412: Auditor - Generate Heatmap

As a Auditor, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0413: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0414: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0415: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0416: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0417: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0418: Auditor - Verify Token

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0419: System - Verify Token

As a System, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0420: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0421: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0422: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0423: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0424: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0425: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0426: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0427: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0428: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0429: Auditor - Generate Heatmap

As a Auditor, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0430: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0431: Student - Sync Data

As a Student, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0432: Auditor - Upload Proof

As a Auditor, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0433: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0434: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0435: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0436: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0437: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0438: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0439: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0440: Auditor - Check Status

As a Auditor, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0441: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0442: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0443: Auditor - Verify Token

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0444: Reviewer - Generate Heatmap

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0445: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0446: Reviewer - Check Status

As a Reviewer, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0447: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0448: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0449: Admin - Approve Sanction

As a Admin, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0450: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0451: Auditor - Verify Token

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0452: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0453: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0454: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0455: System - Sync Data

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0456: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0457: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0458: Auditor - Verify Token

As a Auditor, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0459: Student - Sync Data

As a Student, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0460: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0461: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0462: Auditor - Sync Data

As a Auditor, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0463: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0464: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0465: System - Flag Mismatch

As a System, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0466: System - Check Status

As a System, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0467: Auditor - Generate Heatmap

As a Auditor, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0468: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0469: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0470: Student - Check Status

As a Student, I want to check status, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes check status in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0471: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0472: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0473: Admin - Flag Mismatch

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0474: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0475: Admin - Generate Heatmap

As a Admin, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0476: System - Sync Data

As a System, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0477: Reviewer - Verify Token

As a Reviewer, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0478: Student - Verify Token

As a Student, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0479: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0480: Admin - Flag Mismatch

As a Admin, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0481: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

US-0482: Student - Flag Mismatch

As a Student, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0483: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0484: Admin - Verify Token

As a Admin, I want to verify token, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes verify token in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0485: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.

3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0486: Reviewer - Upload Proof

As a Reviewer, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0487: Auditor - Flag Mismatch

As a Auditor, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0488: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0489: Reviewer - Flag Mismatch

As a Reviewer, I want to flag mismatch, so that the operational efficiency is improved.

Acceptance Criteria:

MoTA Unified Scholarship Platform PRD (ID: 26238)

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes flag mismatch in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0490: Reviewer - Sync Data

As a Reviewer, I want to sync data, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes sync data in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0491: Admin - Upload Proof

As a Admin, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0492: Reviewer - Approve Sanction

As a Reviewer, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0493: Reviewer - Generate Heatmap

MoTA Unified Scholarship Platform PRD (ID: 26238)

As a Reviewer, I want to generate heatmap, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes generate heatmap in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0494: Student - Approve Sanction

As a Student, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0495: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0496: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0497: Student - Upload Proof

As a Student, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0498: Auditor - Approve Sanction

As a Auditor, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0499: System - Approve Sanction

As a System, I want to approve sanction, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes approve sanction in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.
5. Audit log is updated with timestamp and IP address.

US-0500: System - Upload Proof

As a System, I want to upload proof, so that the operational efficiency is improved.

Acceptance Criteria:

1. The action must be authenticated via Supabase JWT.
2. If network is unreachable, action is queued in local Isar DB.
3. The system executes upload proof in under 300ms at p95 latency.
4. Optimistic UI update reflects success immediately.

5. Audit log is updated with timestamp and IP address.

16. Technical API Key & Mock Data Specs

Real Keys Needed:

1. Supabase URL & Anon Key: Shipped with the Flutter app. Safe for client-side as RLS protects tables.
2. Supabase Service Role Key: Strictly injected into CI/CD secrets for edge function deployment. NEVER in client app.
3. Gemini / Groq Key: Used on the backend Edge Functions to power the JAGO chatbot via RAG.

Mock Gov Keys (Adapter Pattern):

Live endpoints (UIDAI, DigiLocker, NSP, SFMP, NOS) are NOT accessible. We build the ApiSetuAdapter class. It implements an interface that, instead of calling <https://api.digitallocker.gov.in>, calls our own mocked Edge Function which returns a W3C Verifiable Credential schema perfectly matching the Gov specifications.

Real Keys Needed:

1. Supabase URL & Anon Key: Shipped with the Flutter app. Safe for client-side as RLS protects tables.
2. Supabase Service Role Key: Strictly injected into CI/CD secrets for edge function deployment. NEVER in client app.
3. Gemini / Groq Key: Used on the backend Edge Functions to power the JAGO chatbot via RAG.

Mock Gov Keys (Adapter Pattern):

Live endpoints (UIDAI, DigiLocker, NSP, SFMP, NOS) are NOT accessible. We build the ApiSetuAdapter class. It implements an interface that, instead of calling <https://api.digitallocker.gov.in>, calls our own mocked Edge Function which returns a W3C Verifiable Credential schema perfectly matching the Gov specifications.

Real Keys Needed:

1. Supabase URL & Anon Key: Shipped with the Flutter app. Safe for client-side as RLS protects tables.
2. Supabase Service Role Key: Strictly injected into CI/CD secrets for edge function deployment. NEVER in client app.
3. Gemini / Groq Key: Used on the backend Edge Functions to power the JAGO chatbot via RAG.

10. CI/CD Pipeline & DevOps

GitHub Actions Workflow

The CI/CD pipeline consists of 3 stages: Test, Build, Deploy.

1. Test Stage: Runs flutter analyze, flutter test, and Dart Code Metrics. Enforcement of 80% test coverage.
2. Build Stage (Android): Fastlane executes flutter build appbundle --release --obfuscate --split-debug-info. Environment variables (Supabase URL) are injected via --dart-define.
3. Deploy Stage: Uploads AAB to Google Play Console Internal Track via Fastlane Supply.
4. Backend: Supabase migrations are applied automatically via Supabase CLI in GitHub Actions.

Supplemental Design Guidelines Section 0

In rural environments, battery life and data constraints are paramount. High-contrast ratios (WCAG AAA) must be maintained. Animations are stripped down to essential structural transitions. Caching strategies include aggressive pre-fetching of small JSON payloads when on WiFi, and pausing all non-critical telemetry on cellular networks. This ensures the app footprint and operational cost remain negligible for the tribal student demographic.

This ensures the app footprint and operational cost remain negligible for the tribal student demographic.

In rural environments, battery life and data constraints are paramount. High-contrast ratios (WCAG AAA) must be maintained. Animations are stripped down to essential structural transitions. Caching strategies include aggressive pre-fetching of small JSON payloads when on WiFi, and pausing all non-critical telemetry on cellular networks. This ensures the app footprint and operational cost remain negligible for the tribal student demographic.

This ensures the app footprint and operational cost remain negligible for the tribal student demographic.

Supplemental Design Guidelines Section 91

In rural environments, battery life and data constraints are paramount. High-contrast ratios (WCAG AAA) must be maintained. Animations are stripped down to essential structural transitions. Caching strategies include aggressive pre-fetching of small JSON payloads when on WiFi, and pausing all non-critical telemetry on cellular networks. This ensures the app footprint and operational cost remain negligible for the tribal student demographic.

In rural environments, battery life and data constraints are paramount. High-contrast ratios (WCAG AAA) must be maintained. Animations are stripped down to essential structural transitions. In rural environments, battery life and data constraints are paramount. High-contrast ratios (WCAG AAA) must be maintained. Animations are stripped down to essential structural transitions. Caching strategies include aggressive pre-fetching of small JSON payloads when on WiFi, and pausing all non-critical telemetry on cellular networks. This ensures the app footprint and operational cost remain negligible for the tribal student demographic.

In rural environments, battery life and data constraints are paramount. High-contrast ratios (WCAG AAA) must be maintained. Animations are stripped down to essential structural transitions. Caching strategies include aggressive pre-fetching of small JSON payloads when on WiFi, and pausing all non-critical telemetry on cellular networks. This ensures the app footprint and operational cost remain negligible for the tribal student demographic.
